

# City of Yakima Vehicle Collisions by Severity of Injuries

Accident Severity uses an index to compare locations relative to the severity of injuries. A weighted formula is used which gives emphasis to fatal or disabling injuries, a moderate weight to non-disabling injuries and factors the number of property damage only accidents. The higher the index, the more severe the accident location.

### Collision Injuries

**Severity Index**

- Low (Index less than 50)
- Moderate (Index 51 - 100)
- Most Severe (Index 100+)
